Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Disclosure; Page 135; 139pp; English.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of finbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native

comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid polymer comprising a recombinant AgfA acid sequence or sequences grown on a Salmonella, E. coli or conjumer into the animal in conjunction with a carrier or diluent. (I) is cuseful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for conjunction with a carrier or diluent. (I) is cuseful for the expression animal. In a fimbrial presentation conjunction with a carrier or diluent for conjunction with a carrier or diluent. (I) is conjunction with a carrier or diluent. (I) is conjunction with a carrier or diluent for combinant animal. In a fimbrial presentation conjunction conjunction with a carrier function properties research the to conjunct and animal. In a fimbrial presentation conjunction possesses both the conjunctive and adhesion properties relevant for an efficient live immunogenic, the carrier fimbrial subunit proteins are usually strong conjunctions. Which may be important for directing an immune response conjunction of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC segment of the gene has been replaced by a segment of a foreign DNA CC segment of the gene has been replaced by a segment of a foreign DNA CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbriae (SEF17/TAF) nucleation depended CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) CC homologous species; (3) directing recombinant gene into the chromosome of the chromosome of the chromosome of the comprising separating an amino acid polymer comprising a recombinant gene CC comprising separating an amino acid polymer comprising a recombinant agfA cC acid sequence or sequences grown on a Salmonella, E coli or CC polymer into the enimal in conjunction with a carrier or diluent. (1) is CC eliciting an immune response in an animal cC golymer into the enimal in conjunction with a carrier or diluent. (1) is CC system the heterologous antigens are presented in high numbers (up to immunogenicity and adhesion properties are presented in high numbers (up to immunogens, which may be important for directing an immune response con immunogens, which may be important for directing an immune response (CC inexpensive to purify in large amount. The present sequence is given in the present in an arimal are easy and CC inexpensive to purify in large amount. The present sequence is given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches 141;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          acid sequence or sequences grown on a Salmonella, E. coli or Enterobacterlaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of finbriae comprising recombinant AgfA, CegA and AgfA-homologue fimbria subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species; (3) directing an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given
                    Salmonella;

                                                                                                                   S
                                                                                                                                                           밁
                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                              The present invention describes a recombinant agfA gene (1) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene comprising recombinant gene comprising the native copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is CC useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to Soytem the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit protein are usually strong communogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong communogens, which may be important for directing an immune response ca against the inserted epitope, and hybrid fimbriae are easy and conversed to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                               Matches

CC Regment of the gene has been replaced by a segment of a foreign DNA CC (1) use of thin aggregative fimbriae (SERI7/TNAP) nucleation described are: (2) use of thin aggregative fimbriae (SERI7/TNAP) nucleation depended CC assembly system of strains of salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) (2) (2) (3) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant of protein containing a replacement segment or segments of foreign amino CC Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein main a immune response in an immune response in an enterobacteriaceae host cell, from the host cell and introducing the cuseful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to companion), the carrier fimbrial subunit protein possesses both the communogenicity and adhesion properties relevant for an efficient live immunogenicity and the hybrid fimbrin protein are usually strong immunogens. which may be immortant for directing an immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뮍

        The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of finbriae comprising recombinant AgfA, CegA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino
                                                                                                                                                                                                                                        Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                 WPI; 2000-672631/65.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the accomplished the present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Salmonella; agfA;

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described

Recombinant agfA gene having a segment replaced by a foreign which encodes foreign epitope or antigen, expresses recombina protein useful for eliciting immune response in animal.

expresses recombinant use in animal.

DNA sequence ant AgfA

Homologue fimbria subunits, respectively, (2) and AgfA. Homologue fimbria subunits, respectively, (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal, cc copy of that gene; and (4) eliciting an immune response in an animal, respecies, replacing the native CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC acid sequence of sequences grown on a Salmonella, E. coli or CC useful for the expression of recombinant AgfA protein which is useful for CC useful for the expression of recombinant AgfA protein which is useful for CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC immunogenicity and adhesion properties relevant for an efficient live compensate the inserted spitope, and hybrid fimbria are usually strong CC against the inserted apitope, and hybrid fimbriae are easy and consequence in an animal. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

CC directing recombination of a recombinant gene into the chromosome of the CR homologous species; (3) directing recombination of a recombination of a recombination of a recombination of a recombination of back into the chromosome of the homologous species, replacing the native CR pack into the chromosome of the homologous species, replacing the native CR protein containing an amino acid polymer comprising a recombinant AgfA CR comprising separating an amino acid polymer comprising a recombinant CR protein containing a replacement segment or segments of foreign amino CR containing a replacement segment or segments of foreign amino CR enterobacteriaceae host cell, from the host cell and introducing the CR polymer into the animal in conjunction with a carrier or diluent. (I) is CR contained the expression of recombinant AgfA protein which is useful for CR eliciting an immune response in an animal. In a fimbrial presentation CR system the heterologous antigens are presented in high numbers (up to CR immunogenicity and adhesion properties relevant for an efficient live immunogens, which may be important for directing an immune response CR immunogens, which may be important for directing an immune response CR immunogens, which may be important for directing an immune response CR immunogens, which may be important for directing an immune response CR immunogens, which may be important for directing an immune response CR immunogens, and hybrid fimbriae are easy and CR inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
